DYNAPACK H SERIES Vertical Packaged Air Conditioner with Gas Heat Suggested Bid Specification for Product and Application

The supplier will provide vertical packaged gas heat / electric air conditioner of the sizes and capacities shown on the schedule and listed in the specifications. Each unit shall consist of a primary unit, wall sleeve, and outside grille. Units shall be ETL listed and shall be Suburban Manufacturing Company DynaPack models, or equivalents. The units shall be located as shown on the drawings.

Unit's AFUE shall be rated at 92% minimum and the EER of the air conditioner shall not be less than 10.0 EER.

Units shall be designed to operate on 208/230 volts, 60 Hz, single phase power.

Units shall not exceed 28 3/8" wide and 24 3/8" deep. The wall opening shall not be larger than 28 9/16" wide and 28 3/4" tall for units up to 24,000 BTU in cooling capacity, and 28 9/16" wide and 32 3/4 " tall for units larger than 24,000 BTU in cooling capacity.

Units shall be designed to operate on Natural gas for the heating cycle.

CABINET:

Unit cabinet shall be a standard product of the manufacturer and shall be packed to prevent damages when reasonable care is exercised during shipment. Warnings on packaging shall alert handlers to the hazards of improper handling or stacking.

Each cabinet shall consist of the following system and components:

- Each unit cabinet shall be constructed of 20-gauge steel with a protective baked-on enamel finish.
- Refrigeration system constructed to isolate the hermetically sealed compressor from external vibration. The system shall include copper/aluminum condenser and evaporator coils with expansion valve refrigerant control. (NOTE: Except 1 ton unit)
- Air flow system consists of a five speed room air motor to allow the airflow to be matched to the duct system. A separate condenser fan operates in the A/C cycle only.
- Condenser coil and evaporator coil shall be constructed of copper tubes/aluminum fins and shall be bonded to tubes to prevent electrolytic action.
- Indoor and outdoor airflow will match the coil capacity for efficient transfer of heat. Design of the unit shall prevent water blow-off on the indoor evaporator coil.
- Unit to contain a permanent return air filter, constructed of washable media, that installs and removes easily.

- Unit to have provision for introduction of fresh air into dwelling.
- Factory-installed, gas-fired heat exchanger with electronic controlled, spark ignition system and a "draw-through" negative draft combustion air system. Gas ignition shall occur by energizing hot spark electrode, which lights the burner on each thermostatically controlled heating cycle.

WALL SLEEVE:

Wall sleeve shall be constructed of 20-gauge galvanized steel. Base drain pan shall be 18-gauge galvanized steel. Sleeves shall be installed through exterior walls where shown on the plans and shall be level from side to side. Sleeve shall be secured to the wall at both sides as shown in installation instructions. In no instance shall fasteners be used through the base pan so as to protect the water integrity of the base pan.

OUTSIDE GRILLE:

Special grilles to be supplied by Suburban Manufacturing Company only.

GAS TYPE:

Natural gas units shall be equipped with a gas valve having a built-in regulator set to operate at the gas inlet supply pressure, minimum 5" W. C., maximum 7" W.

SERVICE:

Bidders shall submit complete information regarding service availability, including address(es) and phone number(s), along with complete information of manufacturer address and phone number to cover service information pertinent to installed equipment.

RESPONSIBILITY FOR INSTALLATION, START-UP, TESTING, DEMONSTRATION:

Units shall be installed in full accordance to the manufacturer's recommendation. The manufacturer shall not be liable for unit failure resulting from improper installation, which invalidates the warranty. Bidders shall specify their responsibilities for the initial starting of units, performing necessary tests and adjustments to place units in proper operating condition and demonstrating heating and cooling operations to the owner or the owner's representative.

WARRANTY:

There shall be a one-year limited warranty on parts and labor and a five-year limited warranty on the compressor and heat exchanger.
